COIN-OPERATED HARD-MOUNT WASHER-EXTRACTORS

L-SERIES

Big Look; Big Power

Continental's Hard-Mount Washers seem larger than similar-sized machines thanks to a unique framed door opening. Their big look and big power draw customers to your store. Continental's large capacity machines—ExtraLoad™, ExtraLoad Plus™, PowerLoad™ and PowerLoad Plus™—easily handle your customers' heaviest and bulkiest loads, including rugs, comforters, sleeping bags and more. Used wisely, these power machines can help storeowners make the most of their equipment investment by catering to new markets. During a laundry's slow

hours of operation, these large-capacity machines can be utilized for wash-dry-fold services or to process laundry for commercial accounts, such as catering companies, restaurants, schools, salons, health clubs and child care centers. Whether servicing commercial accounts, busy professionals or families of every size, Continental washer-extractors cater to your every need.

Our Mission: Your Success

At Continental, we believe that the success of our customers determines the continued growth and

success of our company. That's why we're committed to providing our customers with a full line of quality-built Continental commercial/industrial laundry equipment, as well as a multitude of marketing and service support programs. Continental, along with its professional distributor network, offers a complete laundry operations package designed to assist customers in building strong foundations for their businesses. From a dedicated service team and large parts and equipment inventories to financing and comprehensive planning services, "Our Mission is Your Success".

POWERFUL

The unique appearance and large capacity draw customers to your store.

CONTINENTAL QUALITY

Backed by Continental Girbau, Inc., a strong and innovative company headquartered in Oshkosh, WI.

Continental Hard-Mount Washer-Extractors—available in doubleload- to 125-pound capacities—bring durability, customer convenience and the ultimate flexibility to coin laundries looking to maximize profits and reduce maintenance. Standard with a digital-coin drop, Continental Hard-Mount Washer-Extractors are also available debit-card ready and offer easy-to-use programmable controls, heavy-duty construction, energy-efficient technology and outstanding product warranties.

EFFICIENT

Continental's no sump design saves water and energy costs.

DURABLE

AISI-304 stainless steel cylinders provide the ultimate in quality and durability.

EASY-TO-USE

The CM Control offers easy operation with four program selections.

Durability is in the Design

Unmatched durability is the cornerstone of Continental's entire line of hard-mount washer-extractors. Designed to withstand the rigors of constant use, the washer-extractors feature corrosion-resistant AISI-304 stainless steel inner and outer drums and front, side and top panels. Stainless steel makes for simple maintenance, helps extend machine life, and brings a streamlined, clean look to your self-serve laundry.

A sturdy door bar with a heavy reinforced door hinge protects the door window from outside impacts, and a 360-degree door seal eliminates leaking and resulting maintenance hassles. Continental washer-extractors feature a heavy-duty housing and double forsheda water seals to better protect bearing assemblies. Built using a steel H-frame to effectively transmit vibrations away from the machine to anchor locations, Continental Hard-Mount Washer-Extractors are designed to last—making the most of your investment.

Design Reduces Downtime; Maximizes Space

Continental Hard-Mount Washer-Extractors fit closely together, thanks to well-placed mounting holes designed to maximize floor space and minimize installation

costs. Permanently lubricated bearings eliminate hassles associated with routine lubrication. Should service be necessary, a removable top panel enables quick access to key electrical components. And, the DoubleLoad through ExtraLoad Plus™ models feature a lockable service panel on the front of the machine for easy access to the drain valve.

Energy Efficiency

Continental's advanced drive system offers optimum wash performance and heightened energy efficiency. The washer-extractors are also designed without a sump attached to the outer tub, which cuts water and energy usage with each basket fill. Programmable controls further enhance energy efficiency by giving storeowners the ability to control water levels, program wash temperatures by degree and add or eliminate pre-wash and rinse cycles.

User-Friendly Features

The door on Continental Hard-Mount Washer-Extractors opens a full 180-degrees for ease in loading and unloading. Operation of the controls couldn't be simpler; users select one of four wash programs, add detergent and insert coins. A digital readout displays the price and cycle time remaining. A self-cleaning, four compartment dispenser for powders and liquids makes adding detergents quick and easy. Plus,

INVESTMENT BUILT TO LAST

Built using a rugged steel H-frame design, Continental Hard-Mount Washers are built to last.

the machines are available with automatic chemical injection inlets for laundries interested in expanding services while increasing profits.

Programmable Controls Offer Flexibility in Wash, Vend, Marketing & More

Continental's Coin Microprocessor (CM) Control offers the ultimate in flexibility for self-service laundries. A digital coin drop comes as standard feature, however the control is also debit-card compatible—providing easy interface with all major debit card management systems.

The CM Control features four program selections, including a SuperWash™ cycle and a digital display that illuminates vend price and cycle time remaining. Since vend price is programmable based on time of day or day of the week, storeowners can use Continental's CM Control as a marketing tool to adjust vend price. This gives storeowners the flexibility to run multiple promotions—encouraging customers to launder garments during slower operating hours.

Additionally, the control maximizes energy efficiency, productivity and profits through customized wash processes, including wash time, water level and temperature. Storeowners can even cut cycle time by up to 50 percent without eliminating a fill—increasing customer turnover while maintaining quality wash results. A special SuperWash cycle on all models affords storeowners an added marketing and profit opportunity. An electronic diagnostic feature on the control helps isolate service issues quickly so machines remain in operation.

TripleLoad

PowerLoad Plus™
